1 Babase Summarized

Warning
Tables which have names ending in "_DATA" should not be used, there is always a view of the data in these tables that may be used in their place. Tables ending in "_DATA" may change in future Babase minor releases, breaking queries and programs which use the table. Use of the corresponding views will ensure compatibility with future Babase releases.

4 Views Which Add Gid To Tables

In addition to the above views there are a number of views which produce the group of a referenced individual as of a pertinent date. These views are all named after the table from which they are derived, with the addition of the suffixed _GRP. They are nearly identical to the table from which they derive, differing only by the addition of a column named Grp.

The only operation allowed on these views is SELECT. INSERT, UPDATE, and DELETE are not allowed.
4.1 The BIRTH_GRP View

SELECT biograph.*, members.grp AS grp
FROM members, biograph
WHERE members.sname = biograph.sname
  AND members.date = CAST(biograph.birth AS DATE);
